Warm Up Task

- I used Eclipse IDE for creating the Project "warm_up_task"
- I created a new dynamic web project in eclipse.
- Then created various JSP files in Web Content folder such as : index.jsp, logout.jsp, register.jsp and welcome.jsp
- I have also included the css folder in WebContent to provide the code with proper styling.
- The background used is also present in the WebContent folder.
- There is a package in Java Resources -> src folder which has file for password encryption.
- Various files installed and used in Wen-INF lib folder are:
- Jsp-api.jar
- Mysqi-connector-java-5.1.15-bin.jar
- Servlet-api.jar

How to Run:

By clicking project folder and then click Run As -> Run on Server.

DATABASE:

Along-with my submission I am attaching a database dump file.
For database I used MySQLWorkbench
The username and password is: root
It consists of a table named login which stores values like firstname, lastname, email, password
